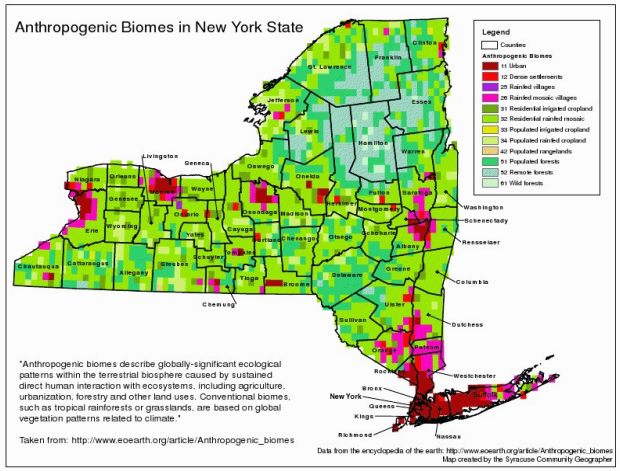
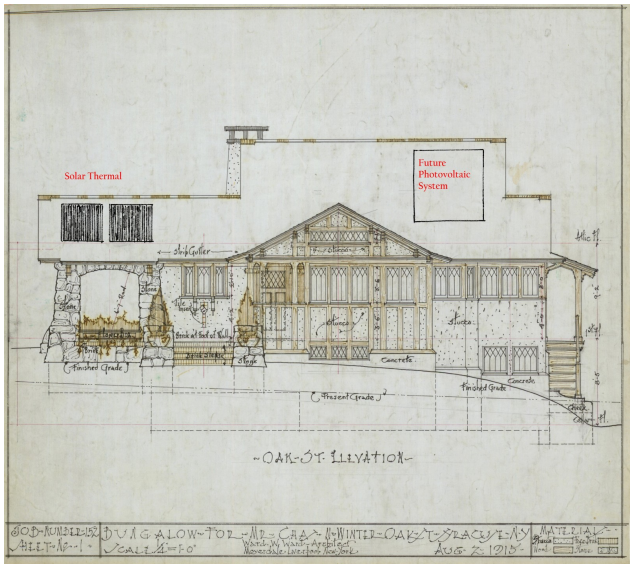
Josh Stack, Counselor of Law, Biomimicry Institute Alumni.

Josh focuses on developing Ecological Performance Standards in the framework of Coevolutionary Design, to manage resilience at the interface of living human/natural communities. Coevolutionary Design is a uniquely holistic designer's and policy maker's framework based on Biomimicry and Resilience Theory.

He is a Biomimicry Institute trained designer, an alum of the Peruvian rainforest and a counselor at law, admitted to practice in New York. Josh graduated from Cornell University with a BS in Biology (focusing in Ecology & Evolutionary Biology), the SUNY Buffalo School of Law with a JD, and the New York University (NYU) School of Law with a Master of Laws.




Josh's current projects include: a coevolutionary design prototype; building a community deconstruction infrastructure in Central New York; various LEED consulting and technical support projects; funded research projects in biologically-inspired sustainable housing; and developing natural infrastructure options for projects and communities. He recently formed MYCO+Evolution, LLC, an entity dedicated to building functional resilience—managing change to preserve identity—in communities, design/building projects, companies, and complex sustainability initiatives.
